BVCI specialise in the development, manufacture and distribution of plastic polymer and pre-cast concrete cable jointing pits and pit access covers. All BVCI plastic polymer cable pits are designed and tested to "Telcordia" standard for top and side wall loading as it is now recognised and accepted that "footpaths" are no longer vehicle free and as such pit designs must ensure both top and side loads are capable to take light vehicles and ride on mowers. BVCI plastic cable pits are manufactured by rotational moulding process using black ultra violet light stabilised polyethylene material. BVCI plastic cable pits have been developed with assistance from industry and major Authorities to ensure they meet the stringent requirements for installation and long term use, and are approved for use by major Authorities in Telecommunications including Telstra, and Energy Authorities. BVCI product is also extensively used in the NBN and alternative Broadband rollouts throughout Australia.

BVCI pre-cast concrete cable pits and manholes are specifically designed and manufactured to meet leading Authority and industry standards and requirements for Telecommunications, Communications and Electrical applications. All BVCI cable pit product are manufactured using 40Mpa strength concrete and are fully steel mesh and bar reinforced, and include Unistrut for cable hanging, and conduit knockouts. Some cable pits are designed specifically to the Authority design and standard, and others designed by BVCI with knowledge and assistance from Authorities and Industry are developed to meet specific load ratings for vehicle traffic whether it be for "footpath" or "roadway" applications. BVCI also design and manufacture "non-standard" cable pits and manholes to meet specific installation projects.

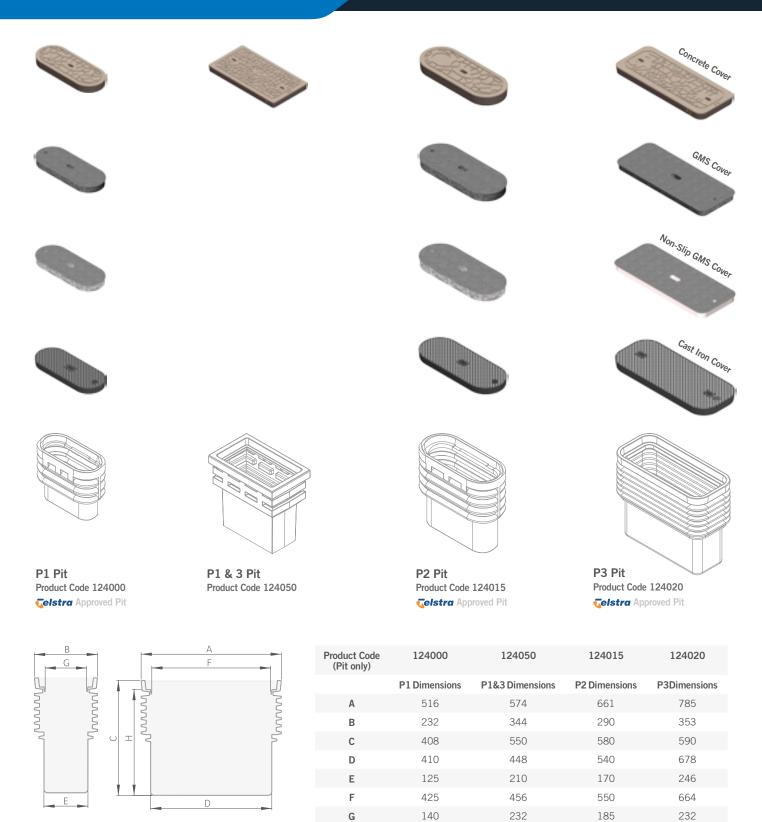

BVCI manufacture a wide range of cable pit access covers in pre-cast concrete, galvanised mild steel, cast (ductile) iron, and selective plastic and composite designs. BVCI access pit covers are available in non locking or locking configuration. Locking covers may be in Allen Key style lockdown bolt or lockbox style to meet high security SCEC endorsement as used in Defence facilities. BVCI also specialise in the manufacture of pit access covers encased in pre-cast concrete roof slabs or plinths for placement over standard or special cable pit installations.

BVCI have a long association with Telstra and are a current approved supplier.
