# Texa EGO

## Wall Mounted Air Conditioners

### Texa EGO Features

- Surface or semi-recessed mount (with optional kit)
- Ozone friendly R134a or R407C
- Electronic thermostat
- Approvals - CE
- Materials  
Mild steel powdercoated
- Surface finish - powdercoated
- Protection rating - IP54

The Texa EGO range are wall mounted enclosure air conditioners available with cooling powers from 300W to 10kW. Cooling surfaces are

designed to prevent fouling from the outside environment and can even work without a filter on the external air intake, which minimises maintenance.

### Inclusions

All fixings required for assembly, electronic controller (TX-C16000106).

### Electronic Controller Features

- Temperature control with ON/OFF adjustment
- Display showing temperature inside the enclosure
- Signalling of problems (max or min temperature)
- Ability to switch the compressor off if the door is opened
- Compressor protection (limits closely spaced starts)
- Digital input for signalling of external alarms
- Ability to interface with PLC's

## EGO Wall Mounted Air Conditioners

### EGO Wall Mounted Air Conditioners

Quick and flexible assembly, reliability, minimal maintenance and optimum design are the criteria used to guide the construction of the EGO series cooling unit. The EGO series is TEXA's response to the requirements of the most demanding user.

### A Wide Power Range

With a range of cooling powers available from 300 to over 10,000W, the EGO series is an extremely compact package, covering the majority of applications for cooling electrical enclosures.

### Simple Installation

Installation is very quick and easy thanks to the simple cutout design and drilling template. All the assembly elements are included in the cooling unit packaging, so there are no hidden extras. The EGO series is designed to ensure easy and safe wiring with the terminal board located at the back of the unit.

### Ideal Enclosure Cooling

Air from the enclosure is removed from the top, cooled inside the cooling unit and expelled back into the enclosure in a low energy jet aimed towards the base. This ensures optimum cooling of the whole panel and prevents any hot spots in the electronics protected by the cooler.

### Minimised Maintenance

All the cooling surfaces feature heat exchange surfaces designed to prevent clogging by solid contaminants in the ambient air. They maintain high efficiency even when the environmental conditions are bad, thus reducing maintenance work. The cooling units are designed to work without a filter on the external air intake.

### Safeguarding the Environment

Great attention has been taken to limit the noise level produced by the EGO units. This was one of the most important criteria when designing the range, and helps to ensure a quiet working environment. To further protect the environment all cooling units use the CFC-free, ozone-friendly Refrigerant R134a or R407C.

### Optimum Enclosure Protection

Thanks to the special internal configuration of the EGO series, which keeps the flow of outside air separate and sealed from the inside air, and to the self adhesive coupling seal, the EGO cooling units allow enclosures to maintain an IP54 protection level.

### Supply Voltage

EGO cooling units are available for mains AC supply voltages of 230V single phase, 400-440V two phase (in the case of voltage between lines when there is no neutral), 115V single phase and 400-460V three phase. All supplies are bi-frequency (50-60Hz), except the 3 phase units which are supplied at 50 or 60Hz depending on the requirements of the location. On request and for larger quantities other voltages can also be supplied.

### Paint Finish

RAL7032 epoxy paint is the standard finish used on all EGO air conditioners. On request other colours and materials such as stainless steel can be supplied.

## Application Tips

- When selecting a cooling unit, maintain a safety margin of at least 10% on the rated power of the most difficult conditions.
- Seal the enclosure well. Cracks or openings will cause the cooling units capacity to drop considerably, and may cause excessive condensation to form.
- Install the cooling unit on the door or wall, but always as high up as possible, so that the air is taken from the top of the enclosure where it is at its hottest.
- The cooling unit is set at a temperature of 35°C, which is the optimum temperature for the majority of applications. Unless it is absolutely necessary, do not reduce the temperature further, as the efficiency of the unit is optimised for 35°C, and condensation may form.

- Arrange the electronic components inside the enclosure in such a way as to facilitate the flow of air. Do not obstruct the air inlet or outlet with components installed too close. Any components that have their own ventilation system must have a flow pattern which does not hinder the cooling units flow.
- Switch the cooling unit off, if the enclosure doors are opened. This is to prevent excessive production of condensate. To this end, installing a limit switch on the door is a good option.
- The line supplying electricity to the cooling unit must be protected by a delay fuse or circuit breaker suitably rated according to the units technical data.

ANCILLARY

# TEXA EGO

## TEXA EGO Cooling Units for Door or Wall Mounting

The Texa EGO range are wall mounted enclosure air conditioners available with cooling powers from 300W to 10kW. Cooling surfaces are designed to prevent fouling from the outside environment and can even work without a filter on the external air intake, which minimises maintenance.

### A wide power range

Cooling powers from 300 to 9850W ensure that the vast majority of electrical enclosures can be cooled with a Texa EGO range air conditioner. Air is removed from the top of the enclosure, where it is at its hottest, cooled inside the air conditioner, and expelled as a low energy jet aimed at the bottom of the system.

### Quick & easy to assemble

All the units can be mounted outside the enclosure, or semi-recessed with the purchase of an optional kit. A template is supplied showing where the enclosure needs to be drilled, and all drillings have been designed to be as simple as possible. Importantly, all assembly elements are included in the supply, so there are no hidden extras, no matter what installation is required. The EGO air conditioners are designed for easy and safe wiring with a terminal board at the back of the unit.

### Reliability & minimal maintenance

All cooling surfaces of the EGO air conditioners are designed to prevent clogging of system by dust particles. This allows a high efficiency to be maintained even when the environmental conditions are bad. The cooling units are designed to work without a filter on the external air intake. High quality components have been used throughout the EGO range which helps to maximize reliability, and minimize maintenance on the unit.

### Protection

All internal and external air flow are kept separated inside the EGO air conditioner with a rating of IP54 when installed with the supplied self-adhesive coupling seal.

The EGO unit also protects the environment by using only the CFC-free, ozone friendly refrigerant R134a.

Contact your local B&R office for details

## TECHNICAL INFORMATION

EGO range air conditioners are available with cooling capacities from 300 to 9850W. They are also suitable for a wide range of power supplies. The table below gives information on the range available, as well as overall dimensions:

Cooling capacity (W)	Dimensions (mm)			Supply Voltage options	Catalogue Number
