WID Series

Anti-Condensation Heaters

- Designed to heat an enclosure without condensation being produced.
- Suitable for use in enclosures where low temperature or high humidity may cause condensation to form in the enclosure, damaging equipment.
- All heaters in this range will not overheat due to self-limiting from positive temperature co-efficient.
- Heating power ranges from 10W – 550W.
- Fan heaters have an expected lifetime of 50,000 hours.
- Available in either 110-250 V AC/DC or 230 V 50/60Hz.
- Thermostat or humidistat optional.
- All fans are bearing supported and rated for 100% duty cycle.
- Operating temperature 60°C.
- Other supply options available on request.
- Conformity, Approvals:
 - UL 94 V-0 (non-metal parts only)
- Manufactured from die cast aluminium / plastic.

Comes standard with:

- All fixings required for assembly to DIN rail.

Thermostats

Extremely compact thermostat with quick snap-in installation and a wide adjustment range. It has either a normally closed (NC), normally open (NO) or a single pole single throw (SPST) contacts. Thermostats are mainly used to control the fans, heat exchangers or to indicate a maximum temperature signal as the contacts are potential free.

Dual Thermostats

Dual element thermostats in a single housing having the same benefits as the single element versions but allow the control of two items within the enclosure. For example one thermostat with contact normally closed for the regulation of heating appliances and one thermostat with contact normally open for the regulation of fans with filters or heat exchangers.

Class EU5 Cloth Filters

The highly efficient class EU5 cloth filters are used in environments where there is very fine dust achieving up to 97% filtration. By using this kind of filter an IP54 protection level can be achieved. High efficiency cloth filters will restrict air flow rate and therefore fans should be over sized for the application. To maintain a high performance of these types of ventilating units it is necessary to periodically check how dirty the cloth filter is and, if necessary, change it with a new one.

TX-AAFFH35	FAN35 & FIL35	10

Class EU4 Cloth Filters

These are standard class EU4 cloth filters for FAN units achieving up to 91% filtration. By using this kind of filter an IP44 protection level can be achieved. To maintain a high performance of these types of ventilating units it is necessary to periodically check how dirty the cloth filter is and, if necessary, change it with a new one. These filters are made in self-extinguishing synthetic fibres with a very close mesh and a progressive filtering strength. Using these filters efficiency reaches 91%.

Metal Air Filters

All air conditioners are designed to be highly robust and very low in maintenance however in extreme dusty conditions the cooling units can be fitted with metal filters to ease maintenance cycles. Compared to the polyurethane foam filters, metal filters are not as aggressive but are easier to clean and maintain. Due to their all aluminium construction they are very robust and can be cleaned with most degreasing detergents again and again.

Polyurethane Air Filters

All airconditioners are designed to be highly robust and very low in maintenance however if the ambient air is highly contaminated (containing particles or aerosols) a filter can be installed behind the intake grille in the space left for it. These filters are made from a polyurethane foam which has excellent mechanical and chemical resistance characteristics.

Humidistats

An alternative method for controlling humidity is using a humidistat with a heater. The dew point inside an enclosure is relative to the humidity and temperature difference between the inside and outside of the enclosure. Heating the internal of the enclosure in high humidity applications will reduce condensation.
