

- Files & Rasps
- Circular Saw Blades
- Handsaws
- Hacksaws

In 1864, the Nicholson File Company became the first successful manufacturer of machine-made files. Today, Nicholson® is the most recognized brand of files in the world. Over the years, the Nicholson product line has increased in scope and size, and now includes files, rasps and handsaws, all manufactured to uncompromising standards of quality.

Files

**FILES LISTED IN BOLD FONT ARE CARDED AND INCLUDE CUSHION GRIP HANDLE (EXCLUDING CONTACT POINT FILES)**

**File Terminology**

Length is measured exclusive of tang, from point to heel. Desired stroke length, type of material and its size will determine length required.

**Kinds of Teeth**

- SINGLE-CUT** Single set of parallel, diagonal rows of teeth. singlecut files are often used with light pressure to produce a smooth surface finish or to put a keen edge on knives, shears or saws.
- DOUBLE-CUT** Two sets of diagonal rows of teeth. The second set of teeth is cut in the opposite diagonal direction and on top of the first set. The first set of teeth is known as the overcut while the second is called the upcut. The upcut is finer than the overcut. The double-cut file is used with heavier pressure than the single-cut and removes material faster from the workplace.
- RASP-CUT** Teeth arranged in curved contours across the file face. The curved-cut file is normally used in automotive body shops for smoothing body panels.

**Description**

Work to be accomplished, roughing or finishing, will determine type of teeth and coarseness for each application. Most files are available with three grades of cut: bastard-cut, second-cut and smooth cut. The degree of coarseness is greater in longer files, but differences between bastard, second-cut and smooth are proportionate.

**THE RIGHT FILE FOR THE JOB**

- HAND FILE:** For finishing flat surfaces.
- ROUND FILE:** For circular openings and concave surfaces.
- HALF ROUND FILE:** For flat, concave and convex surfaces.
- HANDY FILE:** For tool sharpening and general filing.
- MAGICUT FILE:** For use on aluminium, brass, bronze, copper, hard plastics, stainless steel.
- SQUARE FILE:** For filing slots, key seats and general surface filing.
- HALF ROUND WOOD RASP:** For use on wood and soft metals.
- CHAINSAW FILE:** For sharpening round, hooded chainsaw teeth.
- WOODCRAFT RASP:** For use on wood, leather and soft metals.
- DOUBLE ENDER FILE:** For sharpening saws with 60° angle.
- FLAT FILE:** For general work on iron, steel etc.
- WARDING FILE:** Locksmith's file for ward notches in keys and narrow places.
- CANTSAW FILE:** For sharpening circular saw blades.
- BODIFILE FILE:** For automotive panel filing.
- MILL FILE:** For draw filing in machine shops, fine finishing and tool sharpening. Also used to file large circular saw blades.
- TAPER FILES:** For sharpening hand saws.
- SWISS PATTERN FILES:** For exact filing of extremely fine cuts. Suitable for toolmakers, watchmakers and jewellers.

**Care of the file**

The teeth of the file should be protected when the file is not in use by hanging it in a rack or keeping it in a drawer with divisions.

Files should always be kept clear of water or grease since this impairs the filing action. It is advisable to wrap the file in a cloth for protection when it is carried in a tool box.

The file teeth should be kept clean at all times by using a file card to clear the grooves between the teeth or a wire file brush.
