

1.6m Under Eave Mount 11MM-HS64UE

The HS64UE is a 1.6m (64") under-eave mount for antennas and catenary cables. It allows you to install it on the underside of a building's eave where there is either no fascia or only a metal skin fascia available. The mount allows you to install it on a building without penetrating the roof and compromising the roof's seal. It is proudly made in Australia from galvanised steel for long-lasting and durable installations.

Features and Benefits

- » Hot dipped galvanised finish
- » Curved steel tube to fit under roof eave
- » Protrudes 340mm
- » Heavy-duty construction
