

## Quick Overview

Socket Tester Wiring/Earth Loop/Polarity/RCD Checker

## Features

### Socket Testers

The Socket and See SOK36 advanced electronics initially performs its own internal self-check to confirm the unit is operating correctly. Next it will automatically check for correct wiring then perform a non-trip loop impedance check. Additional selectable functions are available to check the tripping function of 30mA RCD's and also a mains Active / Neutral polarity check.

- Bright LED's outperform fragile old style neon's
- Logical 'Green for Good' LED Indication
- New Circuitry avoids tripping RCD's when testing wiring
- Continuous audible tone gives positive good wiring indication
- Strong warbling tone gives clear warning of faulty wiring
- Advanced electronics include a quad comparator to give clear indication even on noisy circuits
- New patented 'Fault Locate' electronics gives clearest indication yet of good plus 17 wiring fault conditions
- Built-in self-check at start of testing gives confidence of correct operation at all times
- The first socket tester to also test true earth loop impedance
- Easy colour LED read out system indicates earth loop result as
- Full earth loop non trip test
- Audible tone indication gives clear indication of good socket or problem socket
