## TECHNICAL DATA

## ADJUSTABLE FREQUENCY AC DRIVES

ALLEN-BRADLEY • ROCKWELL SOFTWARE

**Rockwell  
Automation**

## Product Overview

PowerFlex® 70 drives are designed to worldwide standards providing out-of-the-box performance around the globe. Available ratings include: 0.5 to 25 Hp output at 240V ac input, 0.5 to 50 Hp output at 480V ac input, 0.5 to 50 Hp output at 600V ac input.

The PowerFlex 70 drive can be used with a full featured LCD Human Interface Module, which provides multilingual text for startup, metering, programming and troubleshooting.

The PowerFlex 70 can be programmed for either Volts per Hertz, Sensorless Vector or Vector Control with FORCE™ Technology to cover a wide range of applications from fans to extruders.

Optional internal communication modules provide fast and efficient control and/or data exchange with host controllers over popular interfaces. These interfaces include: DeviceNet™, EtherNet, ControlNet™, Remote I/O, Serial Communications and other open control and communication networks. PC tools such as DriveExplorer™ and DriveTools™ SP assist with programming, monitoring, and troubleshooting the PowerFlex 70.

## **Standard Drives Program**

### **Flexible Packaging and Mounting**

**IP20, NEMA/UL Type 1** – For conventional mounting inside or outside a control cabinet. Conduit plate is vertically removable for easy installation and replacement without disturbing conduit.

**IP66, NEMA/UL Type 4X/12 (Indoor Use)** – For mounting directly in the production environment. Listed by UL to resist dust, dirt, etc. and to survive high pressure water spray. Also certified by NSF International to assure conformity with international food equipment standards.

**Flange Type** – For mounting heatsink through back of an enclosure, thus removing a large portion of the heat inside a cabinet. The backside is rated IP66, NEMA/UL Type 4X/12 for both indoor and outdoor use.

**Zero Stacking<sup>TM</sup>** - Drives can be mounted directly next to one another with no reduction of ambient temperature rating (50° C for IP20, NEMA/UL Type 1 and Flange Mount; 40° C for IP66, NEMA/UL Type 4X/12).

### **Space Saving Hardware Features**

**Integral EMC Filtering** provides a compact, all-in-one package solution for meeting EMC requirements, including CE in Europe.

**Integral Dynamic Brake Transistor** delivers a cost-effective means of switching regenerative energy without costly external chopper circuits.

**Internal Dynamic Brake Resistor** requires no extra panel space, and supplies a large amount of braking torque for short periods.

### **Easy to Use Human Interface Tools**

- PowerFlex 7-Class LCD Human Interface Modules provide:
  - Large and easy to read 7 line x 21 character backlit display
  - Variety of languages (English, French, German, Italian, Spanish, Portuguese, Dutch)
  - Alternate function keys for shortcuts to common tasks
  - “Calculator-like” number pad for fast and easy data entry (Full Numeric version only)
  - Control keys for local start, stop, speed, and direction
  - Remote versions for panel mount applications
- PC-based Configuration tools include:
  - **DriveExplorer<sup>TM</sup> and DriveExplorer Lite:** A simple and flexible “On-line” tool for monitoring and configuration while connected to a drive.
  - **DriveTools<sup>TM</sup> SP:** A suite of software tools which provide an intuitive means for programming, troubleshooting and maintaining Allen-Bradley AC and DC drives.
- For simplified AC drive start-up and reduced development time, we've integrated Allen-Bradley PowerFlex drive configuration with RSLogix<sup>TM</sup> 5000 software. This single-software approach simplifies parameter and tag programming while still allowing stand-alone drive software tool use on the factory floor.

## Outstanding Control and Performance

**Vector Control with FORCE™ Technology**  provides outstanding torque and speed regulation, with or without encoder feedback.

**Sensorless Vector Control** develops high torque over a wide speed range, and adapts to individual motor characteristics.

## Drives Features

Fast acting **Current Limit** and **Bus Voltage Regulation** result in maximum acceleration and deceleration without tripping.

**Flying Start** delivers smooth connection into rotating loads, regardless of commanded direction, without the need for any speed feedback device.

**PI Control** can eliminate the need for a separate process loop controller.

**Inertia Ride-Through** offers tripless operation during a prolonged power outage by using the rotating energy stored in high inertia, low friction loads.

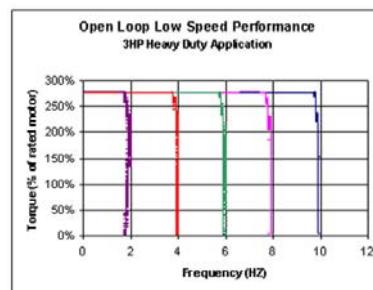

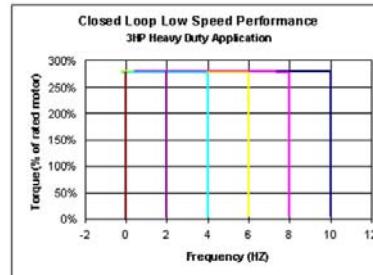

**User Sets**, allowing up to three complete sets of parameter data, can be individually loaded for different batch processes.

**Slip compensation** delivers minimum of 0.5% open loop speed regulation across a wide speed range, eliminating the need for speed feedback devices in some applications.

**Safe Off Option** , the first offering available within the DriveGuard™ series of safety solutions, prevents a drive from delivering rotational energy to motors by integrating a safety circuit with the drive's power switching signals. This solution meets EN 954-1, Category 3.

**Droop Control**  for load sharing applications.

**Sleep/Wake Control**  for analog control of start and stop.

 Feature available for Enhanced Control only.

## Unsurpassed Capability in Network Communications

PowerFlex drives are fully compatible with the wide variety of Allen-Bradley DPI™ communication adapters, offering the following benefits:

BACnet®	DeviceNet™	ControlNet™	EtherNet/IP	Remote I/O	Profinet DP	Interbus	LonWorks	Modbus RTU	Modbus TCP	Metasys N2	Siemens PI FLN	Bluetooth®	Description
✓	✓	✓											<b>Unconnected Messaging</b> permits other network devices (e.g. PanelView) to communicate directly to a drive without routing the communication through the network scanner.
✓	✓	✓	✓	✓			✓			✓		✓	<b>Adapter Routing</b> -- Plug PC into one drive and talk to other Allen-Bradley drives on same network, without being routed through the network scanner.
✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	<b>Access to 100% of all parameters</b> over the network.
✓	✓	✓		✓								✓	<b>AutoBaud</b> capability makes initial connections less problematic.
	✓												<b>Change Of State</b> significantly reduces network traffic by configuring control messages to be sent only upon customer defined states. Very flexible configuration for each node (Example: "reference must change by more than 5%").
✓	✓												<b>Peer Control</b> provides master slave type control between drives, where one or more slave drives (consumers) can run based on the status of a master drive (producer), which can also significantly reduce network traffic.
✓													<b>Automatic Device Replacement (ADR)</b> saves significant time and effort when replacing a drive, by allowing the scanner to be configured to automatically detect a new drive and download the required parameter settings.
✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	<b>Flexible Fault Configuration</b> – Adapters can be programmed to take fault based actions such as ramp to stop, coast to stop, and hold last state, as well as send user configurable logic control and speed reference values. In addition, different actions can be taken based on whether the network experienced a serious problem (broken cable etc.) versus a network idle condition (PLC set to "Program").

## Installation Considerations

### Power Wiring

The PowerFlex 70 has the following built in protective features to help simplify installation:

- Ground fault protection during start-up and running helps ensure reliability
- Electronic motor overload protection increases motor life
- Removable MOV to ground and common mode capacitors to ground ensure compatibility with ungrounded systems. These devices must be disconnected if the drive is installed on an ungrounded, high-resistance or B phase grounded distribution system. These devices must also be disconnected if a regenerative unit is used as a bus supply or brake.
- 6kV transient protection increased robustness for 380-480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations. Consult *Wiring and Grounding Guidelines for AC Drives (publication DRIVES-IN001)* available on-line at [www.rockwellautomation.com/literature](http://www.rockwellautomation.com/literature), for detailed recommendations on input power conditioning, dynamic braking, reflected wave protection, motor cables types.

## Terminal Blocks

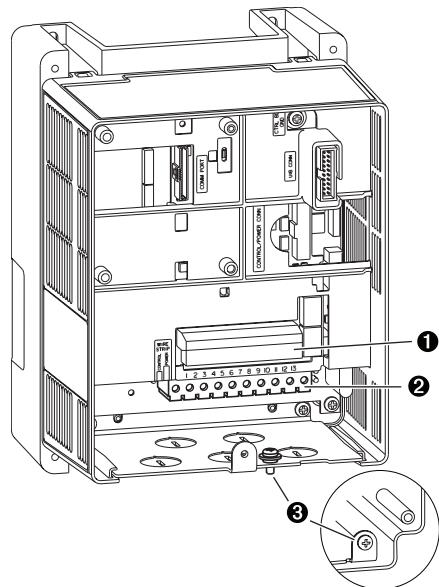

### Terminal Block Specifications

No.	Name	Description	Frame	Wire Size Range <sup>(1)</sup>		Torque	
				Maximum	Minimum	Maximum	Recommended
①	I/O Terminal Block	Signal and control connections	All	1.5 mm <sup>2</sup> (16 AWG)	0.05 mm <sup>2</sup> (30 AWG)	0.55 N·m (4.9 lb·in.)	0.5 N·m (4.4 lb·in.)
②	Power Terminal Block	Input power and motor connections	A, B, & C	3.5 mm <sup>2</sup> (12 AWG)	0.3 mm <sup>2</sup> (22 AWG)	0.66 N·m (5.5 lb·in.)	0.6 N·m (5 lb·in.)
			D	8.4 mm <sup>2</sup> (8 AWG)	0.8 mm <sup>2</sup> (18 AWG)	1.7 N·m (15 lb·in.)	1.4 N·m (12 lb·in.)
			E	25.0 mm <sup>2</sup> (3 AWG)	2.5 mm <sup>2</sup> (14 AWG)	2.71 N·m (24 lb·in.)	2.71 N·m (24 lb·in.)
③	SHLD terminal	Terminating point for wiring shields	All	—	—	1.6 N·m (14 lb·in.)	1.6 N·m (14 lb·in.)

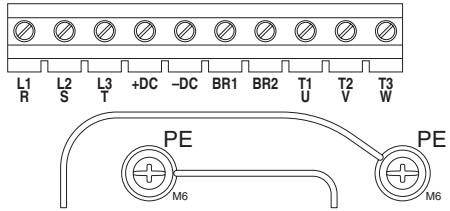

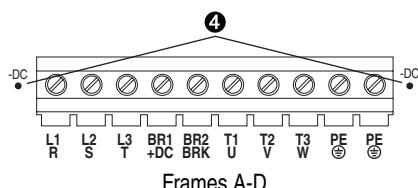

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

Terminal	Description	Notes
BR1	DC Brake (+)	DB Resistor Connection - <b>Important:</b> Do not connect both an internal and external DB resistor at the same time. This may violate the minimum allowed DB resistance and cause drive damage.
BR2	DC Brake (-)	
+DC	DC Bus (+)	
-DC	DC Bus (-)	④ Test point on Frames A-D located to the left or right of the Power Terminal Block. Frame E has a dedicated terminal.
PE	PE Ground	
U, V, W	U (T1), V (T2), W (T3)	To Motor
R, S, T	R (L1), S (L2), T (L3)	AC Line Input Power

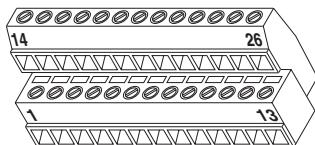

### Typical Terminal Block Location

## Control Terminals

No.	Signal	Factory Default	Description	Related Param.
1	Digital In 1	Stop – CF (CF = Clear Fault)	11.2 mA @ 24V DC 19.2V minimum on state	361 - 366
2	Digital In 2	Start	3.2V maximum off state	
3	Digital In 3	Auto/Man	Important: Use only 24V DC, not suitable for 115V AC circuitry.(3)	
4	Digital In 4	Speed Sel 1		
5	Digital In 5	Speed Sel 2	Inputs can be wired as sink or source.	
6	Digital In 6	Speed Sel 3		
7	24V Common	–	Drive supplied power for Digital In1-6 inputs only.	
8	Digital In Common	–	Not intended for use on circuits outside of the drive. See examples beginning on <a href="#">page 20</a> .	
9	+24V DC	–	150mA maximum load.	
10	+10V Pot Reference	–	2 k ohm minimum load.	
11	Digital Out 1 – N.O.(1)	NOT Fault	<b>Max Resistive Load</b> 250V AC / 30V DC <b>Max Inductive Load</b> 250V AC / 30V DC	380 - 387
12	Digital Out 1 Common		50 VA / 60 Watts <b>Minimum DC Load</b>	
13	Digital Out 1 – N.C.(1)	Fault	10 µA, 10 mV DC	
14	Analog In 1 (- Volts)	(2)	Non-isolated, 0 to +10V, 10 bit, 100k ohm input impedance.(4)	320 - 327
15	Analog In 1 (+ Volts)	Voltage – Reads value at 14 & 15	Non-isolated, 4-20mA, 10 bit, 100 ohm input impedance.(4)	
16	Analog In 1 (- Current)			
17	Analog In 1 (+ Current)			
18	Analog In 2 (- Volts)	(2)	Isolated, bipolar, differential, 0 to +10V unipolar (10 bit) or ±10V bipolar (10 bit & sign), 100k ohm input impedance.(5)	
19	Analog In 2 (+ Volts)	Voltage – Reads value at 18 & 19	Isolated, 4-20mA, 10 bit & sign, 100 ohm input impedance.(5)	
20	Analog In 2 (- Current)			
21	Analog In 2 (+ Current)			
22	10V Pot Common Analog Out (- Volts) Analog Out (- Current)	(2) Output Freq	0 to +10V, 10 bit, 10k ohm (2k ohm minimum) load. 0 to 20mA, 10 bit, 400 ohm maximum load.(6) Referenced to chassis ground.	340 - 344
23	Analog Out (+ Volts) Analog Out (+ Current)		Common if internal 10V supply (terminal 10) is used.	
24	Digital Out 2 – N.O.(1)	Run	See description at No.s 11-13.	380 - 387
25	Digital Out 2 Common			
26	Digital Out 2 – N.C.(1)	NOT Run		

(1) Contacts shown in unpowered state. Any relay programmed as Fault or Alarm will energize (pick up) when power is applied to drive and deenergize (drop out) when fault or alarm exists. Relays selected for other functions will energize only when that condition exists and will deenergize when condition is removed.

(2) These inputs/outputs are dependent on a number of parameters. See "Related Parameters."

(3) For use with 115V AC circuitry. A 115V AC interface option (AK-M9-115VAC-1) must be used

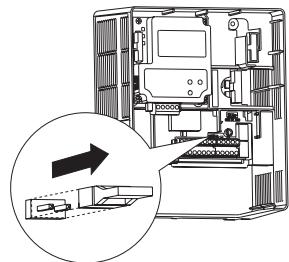

(4) Differential Isolation - External source must be less than 10V with respect to PE.

(5) Differential Isolation - External source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.

(6) Analog output current is only available with Enhanced Control drives.

## Hardware Enable Circuitry (*Enhanced Control Only*)

By default, the user can program a digital input as an Enable input. The status of this input is *interpreted by drive software*. If the application requires the drive to be disabled *without* software interpretation, a hardware enable configuration can be utilized. This is done by removing the enable jumper (ENBL JMP) and wiring the enable input to “Digital In 6”.

1. Remove drive cover.
2. Locate and remove the “Enable Jumper on the Main Control Board.
3. Wire Enable to “Digital In 6.”
4. Verify that 366 [Digital In6 Sel] is set to option 1 “Enable.”

## Safe Off Board Terminal Block (*Enhanced Control Only*)

No.	Signal	Description
1	Monitor - N.C.	Normally closed contacts for monitoring relay status.
2	Common - N.C.	Maximum Resistive Load: 250V ac / 30V dc / 50 VA / 60 Watts Maximum Inductive Load: 250V ac / 30V dc / 25 VA / 30 Watts
3	+24V dc	
4	24V Common	Connections for user supplied power to energize coil.

## Connection Examples

For detailed connection examples refer to the DriveGuard™ Safe-Off Option (Series B) for PowerFlex® 40P and PowerFlex® 70 AC Drives *User Manual*, publication PFLEX-UM003.

## Encoder Interface Terminal Block (*Enhanced Control Only*)

No.	Signal	Description	Jumper Settings
			Receive Voltage
1	5-12V Power(1)	Internal power source 250 mA (isolated)	
2	Power Return		
3	Encoder B (NOT)	Single channel or quadrature B input.	
4	Encoder B		
5	Encoder A (NOT)	Single channel or quadrature A input.	
6	Encoder A		

(1) Jumper selectable +5/12V is available on 20A-ENC-1 Encoder Boards.

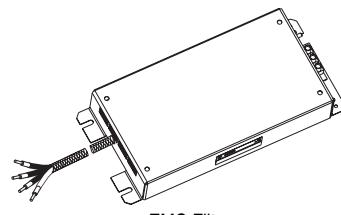

## Sample Encoder Wiring

I/O	Connection Example	I/O	Connection Example

2 Wire Control Reversing	<b>External Supply</b> 	Set Digital Input 1: Param. 361 = 8 "Run Forward" Set Digital Input 2: Param. 362 = 9 "Run Reverse"
3 Wire Control	<b>Internal Supply</b> 	Use factory default parameter settings.
3 Wire Control	<b>External Supply</b> 	Use factory default parameter settings.
Digital Output Form C Relays Energized in Normal State.		Select Source: Param. 380, 384
Enable Input Shown in enabled state.		Standard Control Configure with parameter 366  Enhanced Control Configure with parameter 366 For dedicated hardware Enable: Remove Enable Jumper (ENBL JMP) located on the Main Control Board.

## Cable Recommendations

### Cable Types Acceptable for 200-600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than or equal to 15 mils (0.4mm/0.015 in.). Use Copper wire only. Wire gauge requirements and recommendations are based on 75° C. Do not reduce wire gauge when using higher temperature wire. See table below.

#### Unshielded

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas.** Any wire chosen must have a minimum insulation thickness of 15 Mils and should not have large variations in insulation concentricity.

#### Shielded/Armored Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications/ networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to *Reflected Wave* in “Wiring and Grounding Guidelines for PWM AC Drives,” publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables bundle 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Location	Rating/Type	Description
Standard (Option 1)	600V, 90° C (194° F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	<ul style="list-style-type: none"> <li>Four tinned copper conductors with XLP insulation.</li> <li>Copper braid/aluminum foil combination shield and tinned copper drain wire.</li> <li>PVC jacket.</li> </ul>
Standard (Option 2)	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter OLF-7xxxx or equivalent	<ul style="list-style-type: none"> <li>Three tinned copper conductors with XLPE insulation.</li> <li>5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield.</li> <li>PVC jacket.</li> </ul>
Class I & II; Division I & II	Tray rated 600V, 90° C (194° F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	<ul style="list-style-type: none"> <li>Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor.</li> <li>Black sunlight resistant PVC jacket overall.</li> <li>Three copper grounds on #10 AWG and smaller.</li> </ul>

## Maximum Motor Cable Lengths

In the following tables, a “●” in any of the latter columns will indicate that this drive rating can be used with an Allen-Bradley Terminator (1204-TFA1/1204-TFB2) and/or Reflected Wave Reduction Device with Common Mode Choke (1204-RWC-17) or without choke (1204-RWR2).

- For the Terminator, the maximum cable length is 182.9 meters (600 feet) for 400/480/600V drives. The PWM frequency must be 2 kHz. The 1204-TFA1 can be used only on low HP (5 HP & below), while the 1204-TFB2 can be used from 2-800 HP.
- 1204 Reflected Wave Reduction Device (all motor insulation classes):
  - (1) 1204-RWR2-09  
2kHz: 182.9m (600 ft.) at 400/480V and 121.9m (400 ft.) at 600V. 4 kHz: 91.4m (300 ft.) at 400/480V and 61.0m (200 ft.) at 600V.
  - (2) 1204-RWC-17  
2 kHz: 365.8m (1200 ft.) at 400/480/600V. 4 kHz: 243.8m (800 ft.) at 400/480V and 121.9m (400 ft.) at 600V.

For both devices, power dissipation in the damping resistor limits maximum cable length.

The 1321-RWR is a complete reflected wave reduction solution available for many of the PowerFlex drives. If available, a 1321-RWR catalog number will be indicated in the “Reactor/RWR” column. When not available, use the reactor and resistor information provided to build a solution.

<i>For Further Information on ...</i>	<i>see Publication ...</i>
1321-RWR	1321-TD001
1204-RWR2	1204-5.1
1204-RWC	1204-IN001
1204-TFxx	1204-IN002

## Mounting

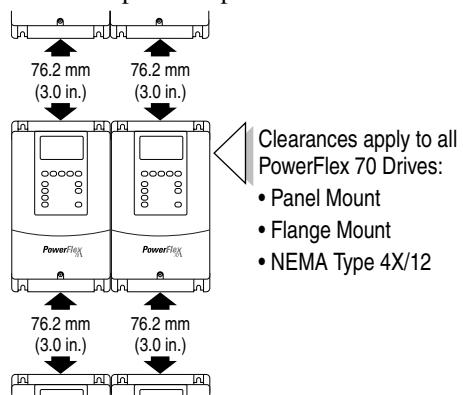

### Maximum Surrounding Air Temperature

Enclosure Rating	Temperature Range
Open Type, IP 20, NEMA/UL Type 1 & Flange Mount	0 to 50 degrees C (32 to 122 degrees F)
IP 66, NEMA/UL Type 4X/12	0 to 40 degrees C (32 to 104 degrees F)
IP 54, NEMA/UL Type 12	0 to 40 degrees C (32 to 104 degrees F)

**Important:** Some drives are equipped with an adhesive label on the top of the chassis. Removing the adhesive label from the drive changes the enclosure rating from NEMA/UL Type 1 Enclosed to Type Open.

### Minimum Mounting Clearances

Specified vertical clearance requirements are intended to be from drive to drive. Other objects can occupy this space; however, reduced airflow may cause protection circuits to fault the drive. In addition, inlet air temperature must not exceed the product specification.

## **PowerFlex 70 Configured Drives**

The PowerFlex 70 Packaged Drives Program allows users to create drive packages based on their specific needs. This program enhances stand-a-lone drive functionality through additional control, power and packaging options which are ideal for OEM and end users with special installation needs.

The program has three levels:

### **Catalog Configured Drives**

The Catalog Configured Drives Program allows users to create drive packages based on their specific needs. A complete drive package may be specified by assembling a single catalog number string that includes a base drive and all required options. Packaging is available for 480V requirements in NEMA Type 1 (IP20), NEMA 4/12 (IP65) indoor, and NEMA 3/4 (IP65) outdoor. The program consists of a fully defined catalog string identified within the price sheet. Focused on higher volume, repeat business, the standard designs provide consistent manufacturing and minimizes customer resources by reducing engineering, manufacturing and installation time. Typical delivery is 10 business days from order entry and can be ordered through the Passport order entry system. *This program uses the Enhanced Control version of the PowerFlex 70.*

### **Modified Configured Drives**

The Modified Configured Drives Program offers users the ability to create drive packages beyond the Catalog Configured Drives offering. Packaging is available for 208V, 240V, 480V and 600V requirements. *This program supports both the Standard and the Enhanced Control versions of the PowerFlex 70.* Options may or may not be defined within this publication. Product can be ordered by:

- Assembling a catalog string from the options listed in this publication.  
Configured options that are listed within this publication will be specified by the heading “*Modified Configured Drives Program Only*” and will have varied lead-times.
- Entering a custom quote request for additional options not listed.  
A custom quote will require a Passport quote using “SP-SDB-CUSTOM” as the line item part number and entering a description of the base catalog string and custom options in the Competitive Summary. For questions or help with a custom quote please contact the Configured Drives Group at 262-512-8415.

## PowerFlex 70 Technical Data

The drive is also designed to meet the appropriate portions of the following specifications: NFPA 70 - US National Electrical Code NEMA ICS 3.1 - Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems. IEC 146 - International Electrical Code.				
Electrical	Voltage Tolerance:	-10% of minimum, +10% of maximum. See page <a href="#">C-17</a> for Full Power and Operating Range.		
	Frequency Tolerance:	47-63 Hz.		
	Input Phases:	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current. Refer to <a href="#">page 23</a> for additional information.		
	Displacement Power Factor (all drives):	0.98 across speed range.		
	Efficiency:	97.5% at rated amps, nominal line volts.		
	Maximum Short Circuit Rating:	200,000 Amps symmetrical.		
	Max. Short Circuit Current Rating: Using Recommended Fuse or Circuit Breaker Type	Maximum short circuit current rating to match specified fuse/circuit breaker capability.		
	Method:	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives.		
Control	Carrier Frequency:	2, 3, 4, 5, 6, 7, 8, 9 & 10 kHz <b>Standard</b> . 2, 4, 8 & 12 kHz <b>EC</b> . Drive rating based on 4 kHz.		
	Output Voltage Range:	0 to rated motor voltage		
	Output Frequency Range:	0 to 400 Hz <b>Standard</b> . 0 to 500 Hz <b>EC</b> .		
	Frequency Accuracy Digital Input:	Within ±0.01% of set output frequency.		
	Analog Input:	Within ±0.4% of maximum output frequency.		

## PowerFlex 70 Technical Data

## Voltage Tolerance

Drive Rating	Nominal Line Voltage	Nominal Motor Voltage	Drive Full Power Range	Drive Operating Range
200-240	200	200†	200-264	180-264
	208	208	208-264	
	240	230	230-264	
380-400	380	380†	380-528	342-528
	400	400	400-528	
	480	460	460-528	
500-600	600	575†	575-660	432-660

Drive Full Power Range = Nominal Motor Voltage to Drive Rated Voltage + 10%.  
Rated current is available across the entire Drive Full Power Range

Drive Operating Range = Lowest† Nominal Motor Voltage - 10% to Drive Rated Voltage + 10%.  
Drive Output is linearly derated when Actual Line Voltage is less than the Nominal Motor Voltage

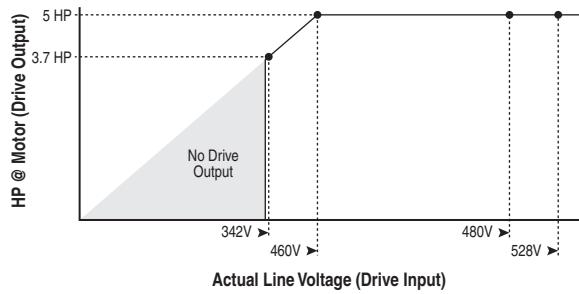

### Example:

Calculate the maximum power of a 5 HP, 460V motor connected to a 480V rated drive supplied with 342V Actual Line Voltage input.

- 2 Actual Line Voltage / Nominal Motor Voltage = 74.3%
- 2  $74.3\% \times 5 \text{ HP} = 3.7 \text{ HP}$
- 2  $74.3\% \times 60 \text{ Hz} = 44.6 \text{ Hz}$

At 342V Actual Line Voltage, the maximum power the 5 HP, 460V motor can produce is 3.7 HP at 44.6 Hz.

## ***Derating Guidelines***

### **Altitude and Efficiency**

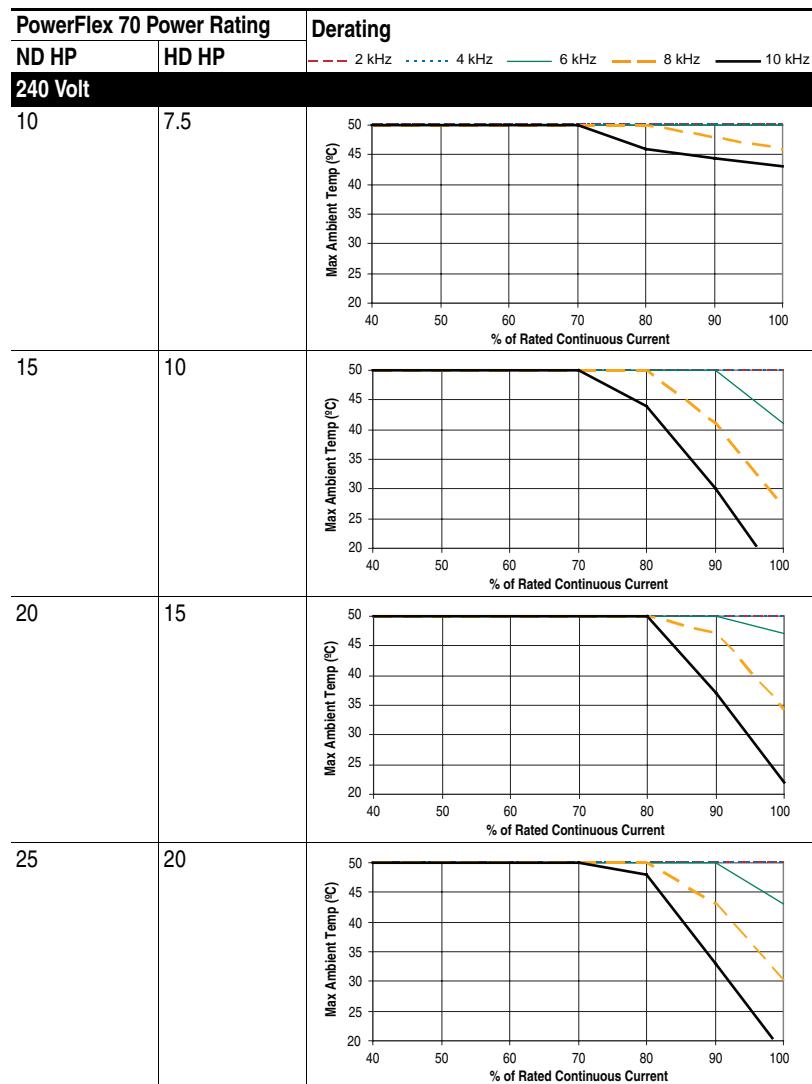

Frame	Type	Derate
All	Altitude	
	Efficiency (typical)
