\* represents less than 0.01% of the total life cycle of the reference flow

Life cycle assessment performed with EIME version EIME v5.8.1, database version 2016-11 in compliance with ISO14044.

The use phase is the life cycle phase which has the greatest impact on the majority of environmental indicators (based on compulsory indicators).

According to this environmental analysis, proportionality rules may be used to evaluate the impacts of other products of this range.

For touch operator interface GP4000M series, the environmental indicator ADPe of other products in this family may be proportional extrapolated by product weight; for the indicator NUFW, impact may be 50% proportional extrapolated by energy consumption values and 50% proportional extrapolated by product weight; for other indicators, impact may be 5%-20% proportional extrapolated by product weight and 80-95% proportional extrapolated by energy consumption values in accordance with the indicator chart.

Please note that the values given above are only valid within the context specified and cannot be used directly to draw up the environmental assessment of an installation.
