TILE ROOF ENTRY GLAND

Supersedes Tile Deck Tight

The patented Tile Roof Entry Gland has revolutionised the solar installation process. Gone are old-fashioned flashing-style deck tights.

- Save time & money
- Easier installation
- Durable EPDM rubber for water-tight seal
- Long service life

SIZE

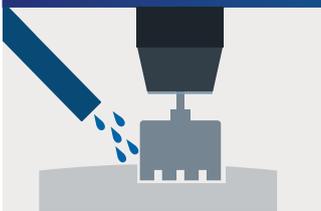

M M32 to Suit 25mm Conduit

PART NO.

CSE-REG-25

1. DRILL

32mm hole with wet diamond hole saw

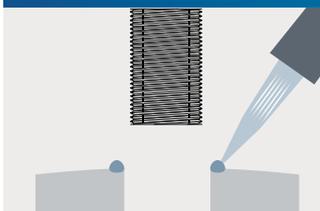

Hole location

- Bottom ¼ of tile in the middle
- Ridge. If ridge too steep, use side of valley
- Do not block valley
- Ensure gland entry point avoids other tiles and framework

2. SQUEEZE

A bead of silicon sealant around hole

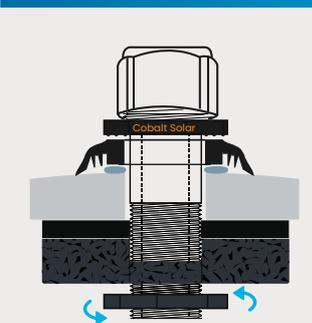

Sealant

- Select compatible sealant
- Apply small bead around entry hole
- Ensure bead is continuous

3. INSERT & LOCK

With wing nut and locking nut

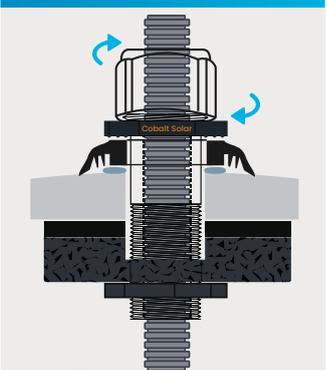

Gland

- Insert gland
- Tighten locking nut to create seal

4. PUSH & SEAL

Insert Conduit all the way and tighten gland head

Conduit

- Insert conduit **through** gland
- Tighten gland head to seal

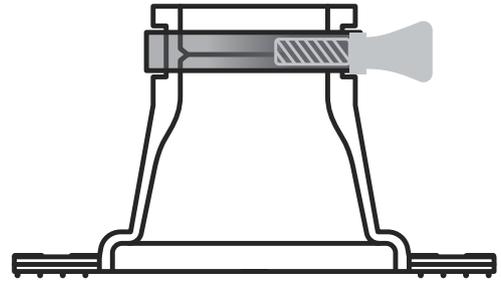

SOLAR MINI TIN ROOF ENTRY

Residential applications

These easy to install, compact entries are suited to a vast range of residential roof profiles.

- Suits common residential roof profiles
- No cutting required
- Increased rubber thickness
- Pre-drilled fixing holes for easy fitting
- Durable EPDM rubber for superior seal
- Does not protrude into valleys
- Long service life

SIZE

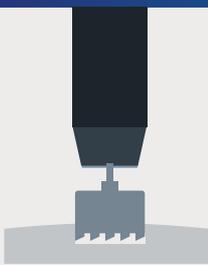

M Suit 25mm Conduit

PART NO.

CSE-MRF-M25-TIN

1. DRILL & CLEAN

Drill with hole saw and clean area

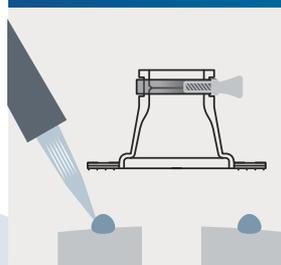

Hole location

- Centre hole on ridge

2. SQUEEZE

Apply Sealant

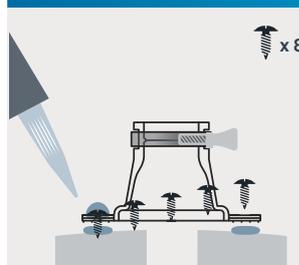

Sealant

- Select compatible sealant
- Apply sealant between roof and entry boot
- Ensure bead is continuous

3. FASTEN & SEAL

Screw or pop rivet and apply sealant

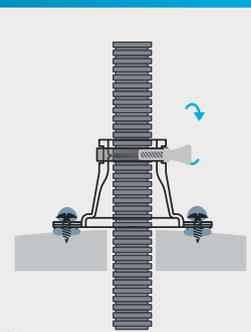

Fasteners & Sealant

- Use minimum 8 fasteners evenly spread
- Apply sealant over fastener heads to seal

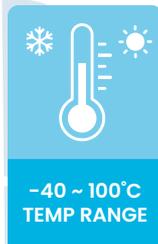

4. INSERT & TIGHTEN

Insert conduit and tighten hose clamp

Tighten

- Insert conduit through entry boot and roof
- Tighten hose clamp to lock in place and seal

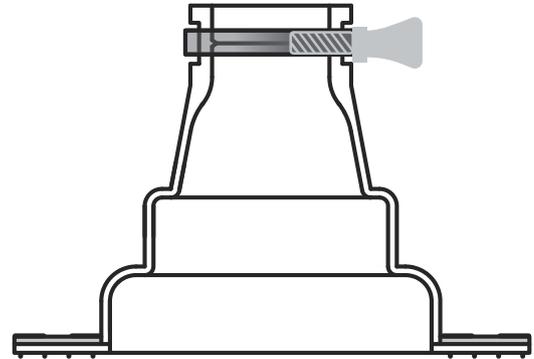

DEDICATED TIN ROOF ENTRY

Residential & Commercial applications

Cobalt Solar Tin Roof Entries are the ultimate time-saving product for residential and commercial applications.

- Suits a broad range of roof profiles
- No cutting required
- Pre-drilled fixing holes for easy fixing
- Increased rubber thickness
- Durable EPDM rubber for water-tight seal
- Long service life

SIZE

M Suit 25mm Conduit

L Suit 32mm Conduit

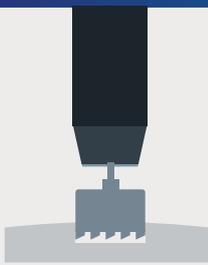

PART NO.

CSE-PRF-M25-TIN

CSE-PRF-M32-TIN

1. DRILL & CLEAN

Drill with hole saw and clean area

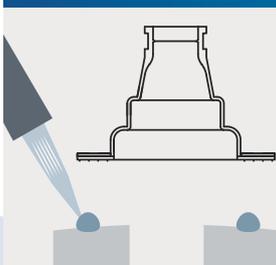

Hole location

- Centre hole on ridge if possible

2. SQUEEZE

Apply Sealant

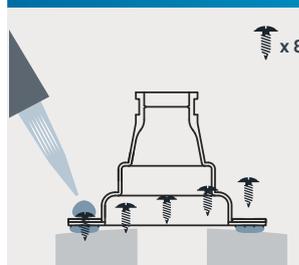

Sealant

- Select compatible sealant
- Apply sealant between roof and entry boot
- Ensure bead is continuous

3. FASTEN & SEAL

Screw or pop rivet and apply sealant

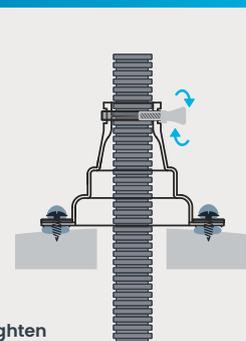

Fasteners & Sealant

- Use minimum 8 fasteners evenly spread
- Apply sealant over fastener heads to seal

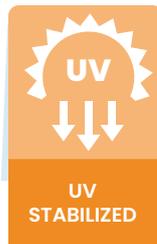

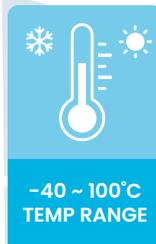

4. INSERT & TIGHTEN

Insert conduit and tighten hose clamp

Tighten

- Insert conduit through entry boot and roof
- Tighten hose clamp to lock in place and seal

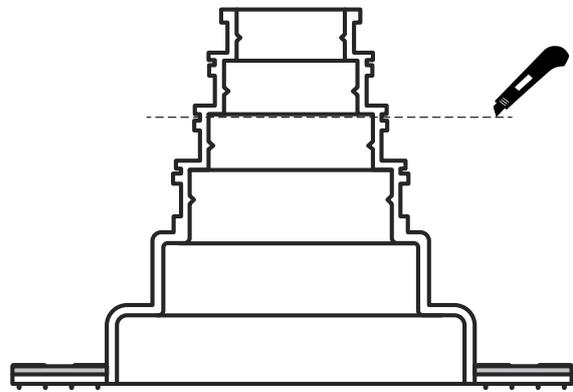

COMMERCIAL TIN ROOF ENTRY

Commercial applications | 32mm - 63mm

This dedicated corrugated conduit entry is engineered for larger commercial solar and rooftop plant installations.

- Suits a broad range of roof profiles
- Pre-drilled fixing holes for easy fixing
- Increased rubber thickness
- Durable EPDM rubber for water-tight seal
- Long service life

SIZE

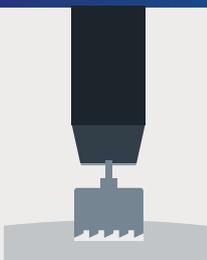

XL Suit 32mm - 63mm Conduit

PART NO.

CSE-URF-M32-M63-TIN

1. DRILL & CLEAN

Drill with hole saw and clean area

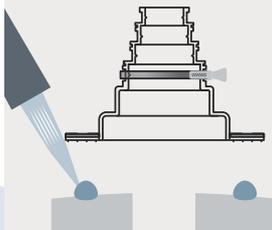

Hole location

- Locate hole on ridge if possible

2. SQUEEZE

Apply Sealant

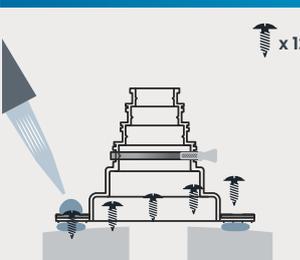

Sealant

- Select compatible sealant
- Apply sealant between roof and entry boot
- Ensure bead is continuous

3. FASTEN & SEAL

Screw or pop rivet and apply sealant

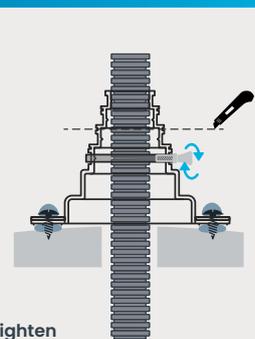

Fasteners & Sealant

- Use minimum 12 fasteners evenly spread
- Apply sealant over fastener heads to seal

4. TRIM INSERT & TIGHTEN

Select size, insert conduit and tighten hose clamp

Tighten

- Trim entry boot at required step
- Insert conduit through entry boot and roof
- Tighten appropriate hose clamp to lock in place & seal
