FAN CATALOGUE

INDEX

AC or DC Fans?

AC stands for Alternating Current, whilst a DC fan has a transformer to manage the electrical flow to convert the AC into DC (Direct Current) to power the motor.

AC fans commonly have a lower upfront cost but often have less features. DC fans commonly have a higher upfront cost but offer significantly lower running costs. They are also not as susceptible to buzzing or humming noises caused by network ripple.

The good news is both AC and DC fans are extremely energy efficient compared to other way's of cooling your home. When fans can be used in conjunction with AC systems, they can provide a cooler home while not having to set the thermostat as low saving you money on your power bill. The market predominantly used to AC fans but there has been a big shift to DC fans due to all of their advantages over AC fans and becoming cheaper as they are more widely adopted. This catalogue showcases an abundance of models.

AC Ceiling Fan Advantages:

- Majority come with a 3 speed wall control (hard-wired) or an optional remote control.

- Normally a more affordable option than a DC fan

- Able to wire multiple ceiling fans to one 3 speed wall controller (ideal for large installs in a single area)

DC Ceiling Fan Advantages:

- Majority come with a remote control or can be connected to a wall controller in many models.

- Quieter running than AC fans

- Larger range of designs to choose from

- In most cases have 5-7 speeds which offers greater airflow control in both summer and winter directions (normally clockwise in Summer and anti-clockwise in Winter)

- Forward / Reverse direction can be changed via the remote control handpiece (AC ceiling fans generally have a manual switch located on the fan)

- DC motors weigh less which can make them less bulky than conventional fan motors, resulting in a lighter, slimmer product that is easier to install.

Choosing the right fan for you

Location

The most important consideration in choosing a ceiling fan is where you want the fan to be installed - Bedroom, Dining room, Lounge, Alfresco, etc. This may determine both the type and size of fan you select.

**SMALL
MEDIUM SPACES**
7 - 20m²

**LARGE
EXTRA LARGE
SPACES**
21 - 34m²

Light

Fans fitted with lights are generally more suitable in smaller spaces as the main source of overhead light where as larger spaces usually have alternative primary light sources, so lights are generally not used on fans in these spaces.

SMALL SPACES
With Light
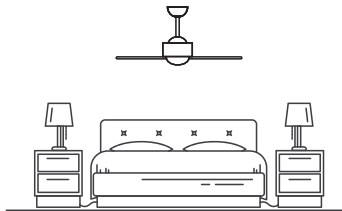

LARGE SPACES
Without Light
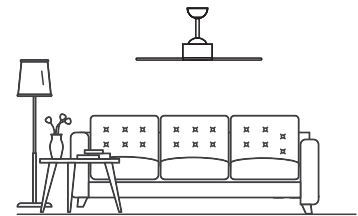

Fan Size

To choose the right fan size, measure the floor area of the room where the ceiling fan will be installed and look up the suggested fan size from the guidelines below. Consider installing more than one fan for larger air movement coverage.

SMALL SPACES
Room Size: 7 - 13m²

Room Type:
Bedroom, Study

Blade Size:
900 - 1000mm

MEDIUM SPACES
Room Size: 13 - 20m²

Room Type:
Bedroom, Study,
Living room

Blade Size:
1000 - 1120mm
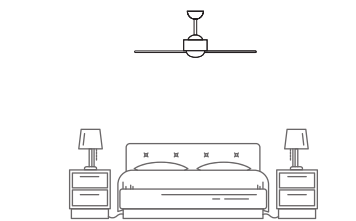

LARGE SPACES
Room Size: 20 - 27m²

Room Type:
Bedroom, Study,
Living room

Blade Size:
1120 - 1370mm
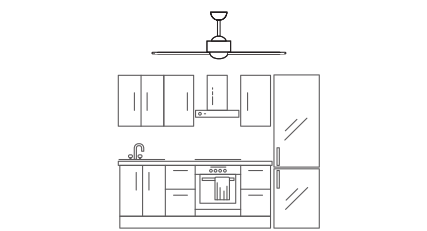

X-LARGE SPACES
Room Size: 27 - 34m²

Room Type:
Bedroom,
Living room

Blade Size:
1370 - 1520mm
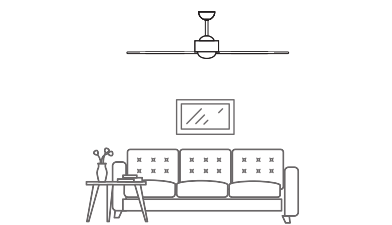

Style

The design of fan you choose is an individual decision however; Timber blades are quieter and may be better suited to quieter rooms, ie. bedrooms. Metal & ABS fans generally move more air and are more durable and suited to high traffic areas.

The Spyda EC is a slimline version of the iconic Spyda Fan, offering a perfect combination of style, performance and energy efficiency. The Spyda EC (electronically commutated) brush-less motor uses up to 75% less power than a comparable AC fan and is considered a 'step up' from existing DC technology. The Spyda EC motor runs at much lower temperatures than traditional motors and can operate continuously even in harsh tropical conditions.
